

Site Audit: Full Report

cloudparadise.ca

- The website maintains a very strong overall technical health score of 95%, showing steady and stable performance.
- The website's readiness to be found by artificial intelligence search assistants improved by 10%, reaching an outstanding score of 99%, with zero pages blocked from AI search bots.
- Out of 28 total pages reviewed, 7 pages are fully healthy, while 21 pages contain issues that should be addressed to improve performance.
- There are 12 errors related to language settings in the website code, which can make it difficult for search engines to display the correct language version of your pages to visitors from different countries.
- There are 17 pages where the amount of behind-the-scenes website code is too high compared to the actual readable text, which can slow down loading speeds and affect search engine visibility.
- There are 4 pages with a very low word count of under 200 words, which search engines may flag as having thin or less helpful content.
- One page has been identified as having only a single link pointing to it from other parts of your website, making it harder for visitors and search engines to find.

Based on the limited data available, these are the initial observations. A more detailed analysis will be possible as more data accumulates over time.

12 hreflang conflicts within page source code	12
About this issue: If you're running a multilingual website, it is necessary to help users from other countries find your content in the language that is most appropriate for them. This is where the hreflang (rel="alternate" hreflang="x") attribute comes in handy. This attribute helps search engines understand which page should be shown to visitors based on their location. It is very important to properly synchronize your hreflang attributes within your page's source code, otherwise you may experience unexpected search engine behavior. For more information, see this article .	0
How to fix: To avoid any conflicts, we recommend that you review your hreflang attributes within your page's source code and fix any of the following issues:	
- Conflicting hreflang and rel=canonical URLs	
- Conflicting hreflang URLs	
- No self-referencing hreflang URLs	
0 pages returned 5XX status code	0
0 pages returned 4XX status code	0

Warnings

Warnings

Project name: cloudparadise.ca

Warnings	Amount
17 pages have low text-HTML ratio About this issue: Your text to HTML ratio indicates the amount of actual text you have on your webpage compared to the amount of code. This issue is triggered when your text to HTML is 10% or less. Search engines have begun focusing on pages that contain more content. That's why a higher text to HTML ratio means your page has a better chance of getting a good position in search results. Less code increases your page's load speed and also helps your rankings. It also helps search engine robots crawl your website faster. How to fix: Split your webpage's text content and code into separate files and compare their size. If the size of your code file exceeds the size of the text file, review your page's HTML code and consider optimizing its structure and removing embedded scripts and styles.	17 0
4 pages have a low word count About this issue: This issue is triggered if the number of words on your webpage is less than 200. The amount of text placed on your webpage is a quality signal to search engines. Search engines prefer to provide as much information to users as possible, so pages with longer content tend to be placed higher in search results, as opposed to those with lower word counts. For more information, please view this video How to fix: Improve your on-page content and be sure to include more than 200 meaningful words.	4 0

Hreflang conflicts within page source code

Project name: cloudparadise.ca

Detailed Issue Description

About this issue:

If you're running a multilingual website, it is necessary to help users from other countries find your content in the language that is most appropriate for them. This is where the hreflang (rel="alternate" hreflang="x") attribute comes in handy. This attribute helps search engines understand which page should be shown to visitors based on their location. It is very important to properly synchronize your hreflang attributes within your page's source code, otherwise you may experience unexpected search engine behavior. For more information, see [this article](#).

How to fix:

To avoid any conflicts, we recommend that you review your hreflang attributes within your page's source code and fix any of the following issues:

- Conflicting hreflang and rel=canonical URLs
- Conflicting hreflang URLs
- No self-referencing hreflang URLs
